

“Stainless Steel ... not just a single alloy”

Stuart Folkard, Principal Materials & Corrosion Engineer, Wood

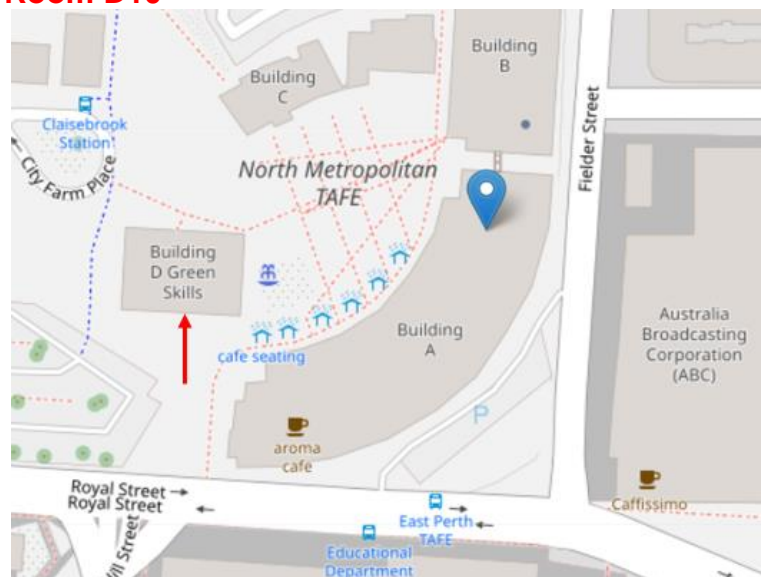

The term ‘Stainless Steel’ refers to a large number of alloys, each of which has different properties and service behaviour. The presentation will cover how the alloys are grouped and classified and will provide details on each group’s chemical, mechanical and corrosion resistance properties some aspects of fabrication as well as the typical applications in which these alloys are used.

Stuart is a Principal Materials and Corrosion Engineer with Wood Australia and has recently returned to the Wood office having being seconded to Chevron’s Gorgon Foundation and Gorgon Stage 2 projects over the last 13 years. Prior to joining Wood, Stuart spent almost 20 years in the stainless steel industry in South Africa with Columbus Stainless.

Time: Finger food and refreshments start at 6.00pm, presentation commences at 6.30pm
